MANUSCRIPT REQUIREMENTS

I. GENERAL REQUIREMENTS:

1. Manuscript Language: Ukrainian and English.
2. The Manuscript length– **from 20 000 to 50 000 characters** with spaces. The file should not exceed 2 MB.
3. The text should be typed in MS Word.
4. Page: A4, all margins – 2.5 cm, without headers and page numbering.
5. Main text – font Times New Roman, regular, lines without hyphens.
6. Paragraph Settings:
   - alignment – the width;
   - line spacing – 1;
   - first line indent – 1 cm;
   - paragraph spacing – 0 mm.
7. The percentage threshold of the text originality in terms of the main research results presentation, as well as the review of sources, excluding standardized academic clichés and bibliography, according to the results of textual coincidences should be no less than **80-85%**
8. The authors are fully responsible for the content of their article, including any parts generated using artificial intelligence tools. They are therefore liable for any inaccuracies or breaches of publication ethics.

> ***Important!*** Artificial intelligence tools (such as ChatGPT) should not be listed as authors of submitted articles. Authorship should be limited to individuals who have made a significant intellectual contribution to the work. Authors must not cite artificial intelligence as an author. Authors are responsible for ensuring that all cited material, including full quotations, is authentic and appropriate, particularly in text and images generated by AI.

II. PUBLISHING DESIGN OF ARTICLE'S STRUCTURAL ELEMENTS:

UDC **(for Ukrainian authors - UDC should be responded to the main journal's approach (37:004), as well as to the subject of the research.** We recommend that you contact specialists: librarians of your educational institution, the Sukhomlynsky State Scientific and Research Library, which provides services for determining the Universal Decimal Classification indices for documents online - https://dnpb.gov.ua/ua/24199-2/, or other scientific libraries)

1. Author's Name (full name, left-aligned, bold, 10 pt).

   If the research results presented in your article are not related to widespread national or international experimental implementation, and there are more than four authors, you should justify each author's personal contribution in the section THE RESULTS AND DISCUSSION. During the review process, the authors' names will be deleted.

   Please note that in accordance with the editorial ethical requirements, the list of authors should indicate the persons who have made a significant contribution to the scientific research presented in the article. Academic status, position, or other seniority should not determine the order in the list; the order of authors should indicate the relative leadership and value of the researchers' contribution to this scientific work. We also recommend you review the criteria for authorship available on the journal's site (III. "Author status" https://journal.iitta.gov.ua/index.php/itlt/ethics).

2. Place of work: name, locality (left aligned, 10pt).

3. ORCID ID (left aligned, 10 pt)
4. e-mail (left aligned, italic, 10 pt).
5. Title (**It is important to ensure that the title of the article is not generalized**. Rather, it should reflect the subject (the purpose of the study), as well as the problem that the study solves (or is aimed at), in order to convey the key aspects of the article. 12 pt, bold, capital letters, paragraph without indenting the first line, centered).
6. The word "Abstract" (bold, 10 pt). Later in the same line – abstract (regular, width, 10 pt, right and left margins - 1 cm).

   The abstract should be **no less 1800, but no more than 2300 characters long**. The abstract as a shortened form of presentation of the scientific text must be informative, understandable, clearly and logically written. The purpose of the abstract is to draw readers' attention and get them interested in reading the whole article. Writing the abstract you should not use general phrases, as well as specify non-essential details and well-known statements. The methodology description is reasonable in case of its novelty or interest in terms of this work. The advantages in the abstract are given to new results and long-term data, important discoveries, conclusions that refute existing theories, as well as data that, in the opinion of the author, are of practical importance.

   Avoid direct repeats of any piece of work. The title of the article should not be duplicated in the abstract text. Besides, you should avoid including tables, drawings, diagrams, and formulas, use the abbreviations and symbols except commonly used ones. If the abbreviations are introduced, then at first use it is necessary to give them a decoding.
7. Phrase "Keywords" (10 pt, bold). Later in the same line – keywords – 3 to 6 terms separated by ";" (10 pt, regular, width, right and left margins - 1 cm).
   In order to increase citation and better recognition of your article by search engines, you should avoid using key concepts represented by a single word or sentence.
8. Basic text (font Times New Roman, 12 pt) should be consisted of the following sections:

1. INTRODUCTION (MANDATORY SECTION) (a separate paragraph, indentation: before 24, after – 12, bold, 12 pt, bold, left aligned)

Statement of the problem.

Analysis of recent research and publications.

As a result of the analysis of sources, previously unsolved parts of the general problem, which the article is devoted to, are necessarily highlighted.

Referencing is made in accordance with IEEE citation style. The references should be numbered and appear in the order they appear in the text. When referring to a reference in the text of the document, put the number of the reference in square brackets:

- the reference list should be drawn from a wide range of international journals, various research schools and academic approaches relevant to the research topic. At the same time, the use of an unduly extensive, formal list of references without any substantive engagement with them is not permitted;
- the reference base must be up to date: the majority of sources used should represent contemporary research in the field of ICT, taking into account its rapid evolution and the constant updating of scientific findings;
- a reference given in square brackets, for example [10];
- comma separated pages [3, p. 35] – 3-d source of 35th page;
- when citing several sources simultaneously, each reference number must be listed separately, in its own brackets, separated by a comma or a dash: [3], [4], or [3]–[5]; however, the use of cascading (interval) citations without an analytical review of the

sources is not permitted. References of the type [7–12] or [3], [4], [5], [6], given without detailing the contribution of individual studies, give the impression of a formal compilation and do not demonstrate depth of analysis. It is necessary to provide a substantive review of the literature with a clear distinction between the authors' positions, a critical analysis and a synthesis of the results obtained;

– avoid excessive citation of materials from the same journal (publisher, research school). The editorial board cannot facilitate an artificial concentration of citations from a single publication, in particular "Information Technologies and Learning Tools".

The research goal and the research objectives.

2. THE THEORETICAL BACKGROUNDS (OPTIONAL SECTION**)**

3. RESEARCH METHODS (MANDATORY SECTION**)**

4. FINDINGS (MANDATORY SECTION)

5. CONCLUSIONS AND PROSPECTS FOR FURTHER RESEARCH (MANDATORY SECTION)

DECLARATION OF GENERATIVE AI AND AI-ASSISTED TECHNOLOGIES IN THE WRITING PROCESS (MANDATORY SECTION**)**

Example:

During the preparation of this manuscript/study, the author(s) used [tool name, version information] for the purposes of [description of use]. The authors have reviewed and edited the output and take full responsibility for the content of this publication.

The use of GenAI tools for the purposes of text editing (e.g., grammar, structure, spelling, punctuation, and formatting) is not covered by this policy and does not need (https://www.mdpi.com/ethics#Artificial_Intelligence)

Important! Authors are fully responsible for ensuring that the content of their manuscript is original, accurate and intact. This includes any material generated by GenAI tools. Authors must also ensure that this content complies with all ITLT publication ethics policies and the internationally recognised general guidelines provided by the Committee on Publication Ethics (COPE, https://publicationethics.org/guidance/cope-position/authorship-and-ai-tools). This includes policies on plagiarism, data fabrication, image manipulation and intellectual property.

ITLT reserves the right to request additional information from authors. Editorial decisions will be made in accordance with the editorial policy and the provisions regarding copyright, licensing, archiving and the rules governing the publishing process, as well as the ethical standards set out on the journal's website.

FUNDING (OPTIONAL SECTION**)**

(organization, institution, university, private person, grant, etc., which finances scientific research)

ACKNOWLEDGMENT (OPTIONAL SECTION**)**

CONFLICT OF INTEREST (MANDATORY SECTION)

Authors must disclose any conflicts of interest that may arise. Further details can be found on the journal's website at https://journal.iitta.gov.ua/index.php/itlt/ethics.

Important! The "Conflict of Interest" section is mandatory if the authors of the manuscript include members of the editorial board, editorial staff or reviewers of the journal "Information Technologies and Learning Tools". Such a situation is regarded as a potential

conflict of interest and requires additional procedures to ensure the transparency and independence of the editorial decision.

If there is no potential conflict of interest, authors should submit a corresponding statement, for example: "The author(s) declare(s) that there is no conflict of interest." Authors may use the following examples, but are not limited to them**:**

Examples

Example 1. The author declares that there is no financial or non-financial conflict of interest that could influence the results of the study or their interpretation.

Example 2. The authors declare that there is no conflict of interest regarding the preparation, submission and publication of this article.

Example 3. The author is a member of the editorial board (editor/reviewer) of this journal. The author did not participate in the editorial review, peer review or decision-making regarding the publication of their own manuscript. The manuscript underwent independent peer review by external experts who are not members of the editorial board.

Example 4. The author is a member of the editorial board of this publication. To ensure the independence of the editorial decision, the author did not participate in the editorial review process. The manuscript was submitted to an independent editor-in-chief and sent for review to external experts who are not members of the editorial board.

Example 5. Co-author [Full Name] is a member of the editorial board of this journal. He/she did not participate in the editorial review of the manuscript or in the decision regarding its publication. The manuscript underwent independent peer review involving external experts.

Example 6. The author(s) declare(s) that the research was carried out with the support of [organisation/project], which may be considered a potential conflict of interest. This did not influence the results of the research or their interpretation.

REFERENCES (TRANSLATED AND TRANSLITERATED)

All in-text citations should be listed in the reference list in Roman script.

The list of used sources is made in accordance with the IEEE style:

- subheading "REFERENCES (TRANSLATED AND TRANSLITERATED)" (a separate paragraph, indentation: before 24, after – 12, bold, 12 pt, bold, left aligned);
- list of translated and transliterated references (type – 10 pt);
- sources are numbered and organized in the list of references in the order they are mentioned in the text, the serial number is indicated in square brackets before the bibliographic description;
- the list of sources should consist of no less than **15** and no more than **50** titles (type - 10pt);
- the authors' self-citation, presented in the list of sources, should not be more than **10%** of the total number;
- in the list of sources, the number of publications in editions indexed in Scopus / WoS is recommended **at least 40%** of the total references. The author should demonstrate his awareness in the research of the scientific community not only in the domestic scientific and educational space;
- the list of references should provide balanced representation of publications from various academic journals. An excessive concentration of citations from a single journal – particularly the journal "Information Technologies and Learning Tools" – is not permitted. The proportion of publications from a single journal should be justified by the nature of the research and should not create the impression that the citation count has been artificially inflated. To ensure thematic diversity of sources, it is recommended that publications from various reputable scientific journals are included;
- names of authors and proper names – transliterated into Latin;
- titles of articles, conferences, journals, publishers – translated into English;

- make sure that each reference cited in the text is in the References (translated and transliterated), and **every hyperlink is active and relevant to the citation**;
- if available, indicate DOI in web links;
- after each reference the language of the source must be indicated in brackets (in Ukrainian) or (in English).

The names of journals, conferences, organizations, publishing houses, scientific institutions should be indicated in abbreviated form.

It is necessary to shorten the names of the months in the dates of access / publication, etc. (in accordance with the language rules of a particular country).

Examples of the referencing in accordance with the style of the IEEE you can find at IEEE REFERENCE GUIDE (2018) - https://www.ieee.org/documents/ieeecitationref.pdf.

Line "Text of the article was accepted by Editorial Team __.202_ " (right alignment, 10 pt)

III. FORMATTING OF INDIVIDUAL OBJECTS:

1.1. Subtitle of the first level (single line, bold, left alignment, spacing 1 cm)

1.1.1. Subtitle of the second level (single line, bold, italic, left indent 1.5 cm)

All illustrations, diagrams, software code and tables should be located as far as they are mentioned in the text (not at the end of the article).

1.1.2. Lists

Lists are issued as follows:
- Numbered – «1.», «1)», «a)»;
- Labeled – «–», «•».

1.1.3. Formulas

Equations and mathematical symbols and letters which denote the variables in the text should be typed in MS Equation, without frame and fill. Font-Times New Roman 12pt, centered, numbered – in parentheses to the right.

$$h_w = \sqrt{\sum_{j=1}^{r_0} cit_j} \qquad (1)$$

where cit - the number of citations, r_0 - the largest index number of the series j, such that $r_w(j) \le cit_j$

1.1.5. Tables

Tables are numbered, centered, without spaces. The word «Table 1.», italic, right. Format of **table name**: centered, bold, position – above the table. After the table it is necessary to leave a blank line.

Table 1

Didactics possibilities of webinar-oriented platforms usage

Didactics tasks	Means of webinar-oriented platform
Presentation of initial information, illustration of teacher's explanation	– audio and video conferencing – whiteboard – electronic bulletin – joint visit Web sites – demonstration of the software – demo presentations and files of various formats
Providing of team interaction	– text chat, audio and video conferencing – collaboration with the white and documents – additional virtual rooms for group learning
Evaluation of learning achievements	– tests, interviews with immediate visualization of the results

1.1.6. Figures

Illustrations (photographs, drawings, diagrams, charts, graphs, maps, screenshots of the website) and tables in the text are referenced with the serial numbers under which they are mentioned in the text. All illustrations in the text are numbered with Arabic numerals (Fig. 1, Fig. 2). The caption under the illustration should correspond to the main text and the illustration itself, be numbered consecutively in Arabic numerals, italics and aligned in the centre - *Figure 1*. Titles of illustrations are placed after their numbers. If necessary, the illustrations are provided with thematic titles (figure captions), which are placed in the middle of the page after the figure and written in capital letters, italics. No period is used after the title. The quality of illustrations should ensure their clear reproduction. Illustrations in the article can be black and white or colour and have a single style.

One blank line should be left before the figure.

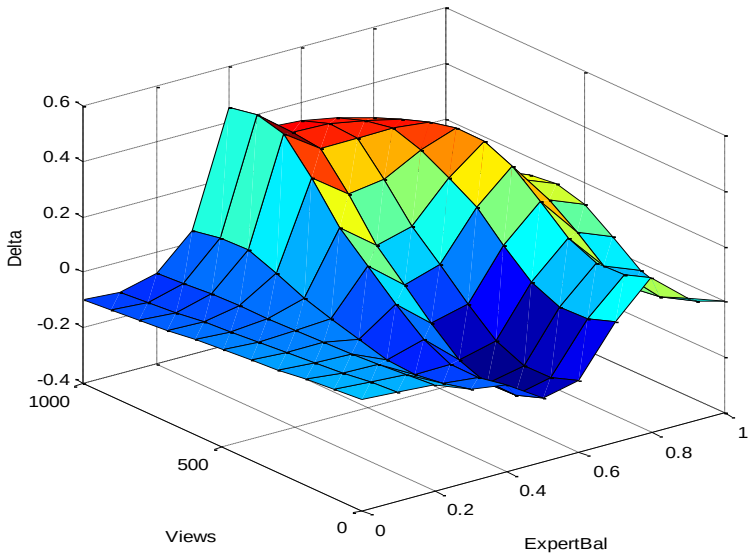

Figure1. Surface of errors of Sugeno type fuzzy systems

1.1.4. The software code

Samples of the software code should be typed by font Courier New, 9 pt. Before and after the code it is necessary to leave a blank line.

```
def nicedet(M):
    s="$\\left|\\begin{array}{ccc} "
    for i in     range(M.nrows()):
        for j in range(M.ncols()):
            s=s+" "+latex(M[i,j])
            if j!=M.ncols()-1:
              s=s+"&"
        s=s+"\\\\"
```
